AROC Annual Report – The state of inpatient rehabilitation in New Zealand in 2019

Abstract

This is the seventh comprehensive annual report describing discharge episodes from subacute inpatient rehabilitation programs provided by New Zealand facilities that are members of the Australasian Rehabilitation Outcomes Centre (AROC).

Keywords

inpatient, aroc, state, –, annual, rehabilitation, zealand, report, 2019

Introduction

This is the seventh comprehensive annual report describing discharge episodes from subacute inpatient rehabilitation programs provided by New Zealand facilities that are members of the Australasian Rehabilitation Outcomes Centre (AROC).

The inaugural report was published in 2013 and described the 2012 data; this sixth instalment describes the 2018 data.

This report is the third to use the version 4 AN-SNAP classification (implemented in Australia in July 2016). For more information about AN-SNAP classification please refer to the AROC website: <http://ahsri.uow.edu.au/aroc>

This report also includes an extended times series analysis, looking at change in various rehabilitation measures over the most recent five years.

The provision of rehabilitation in New Zealand has grown over the past few years, with 2018 seeing a 3.8% real increase in inpatient episodes of rehabilitation provided.

Number of episodes by impairment group, 2019

Funding source for rehabilitation in New Zealand, 2019

Changes in rehabilitation – compared to last year

The following figures look at changes in rehabilitation between last year and this year:

- The first figure considers the number of episodes within each impairment group and documents real changes in episode volume since last year.
- The second figure presents the key changes in rehabilitation outcome measures between last year and this year. The horizontal axis describes the difference between last year and this year averages, while last years actual values are presented on the left side of the graph.

Change in number of episodes by impairment group, 2018 to 2019

Change in outcome measures, 2018 to 2019

Changes in rehabilitation – compared to five years ago

The following figures look at changes in rehabilitation over the last 5 years:

- The first figure shows the total number of episodes each year over the past 5 years.
- The second figure outlines the changing proportion of episodes within each impairment group over the past five years as a proportion of all episodes each year.
- The third figure presents the key changes in rehabilitation outcome measures between five years ago and this year. The horizontal axis describes the difference between five years ago and this year averages, while the actual values from five years ago are presented on the left side of the graph.
- The remaining figures provide a graphical representation of the change in various rehabilitation measures over the most recent five years. Each bar (one per year) represents the difference, positive or negative, of that year's value to the value from five years ago. The value for the bar from five years ago will always be zero.
 - Age at admission
 - Admission to rehabilitation within a week of injury or onset of symptoms
 - Length of stay
 - Proportion of FIM assessments within three days of rehabilitation commencing
 - Admission FIM score as a proportion of the total score possible
 - FIM change as a proportion of the total change possible
 - FIM efficiency

Number of episodes each year - 2015 to 2019

Proportion of episodes by impairment group, 2015 to 2019

Change in outcome measures, 2015 to 2019

Average age compared to five years ago

Over the last five years patients age has fluctuated very little.

Admission to rehabilitation within a week of injury or onset of symptoms compared to five years ago

Over the last five years half of all patients commenced rehabilitation within a week after their injury / onset of symptoms; the proportion has decreased slightly over time with 3% fewer patients in 2019 admitted to rehabilitation within a week of onset compared to in 2015.

Length of stay compared to five years ago

Over the last five years rehabilitation length of stay (LOS) has been consistently around 20-21 days.

Timeliness of FIM assessment within 24 hours compared to five years ago

Over the last 5 years timeliness of FIM assessment has greatly increased, with nearly 13% more patients assessed for their functional ability within 24 hours of rehabilitation commencing in 2019 when compared to 2015.

FIM scores at admission as a proportion of total possible compared to five years ago

Over the last five years the FIM admission score has continued annually to decline slightly, being 3.4% lower in 2019 compared to in 2015.

Relative functional gain in FIM compared to five years ago

FIM Relative Functional Gain (RFG), or change in FIM score possible from admission to discharge has increased slightly over the last few years and was 1.3% higher in 2019 than it was in 2015. In 2019 35.9% of FIM relative functional gain was achieved.

FIM efficiency per week compared to five years ago

Over the last five years weekly FIM efficiency (change in FIM score possible from admission to discharge divided by length of stay x7) has been fluctuating close to 12%. This is in keeping with the observed LOS and FIM change over this period.

Outcomes by impairment

A series of figures and tables are provided for each impairment group; these outline the key descriptive data for this year, changes in episode volumes over the last 5 years, and changes in rehabilitation outcome measures between last year and this year:

- The first figure in each group outlines the number of episodes for each quarter over the past five years, and documents any changes in episode volume over time and/or seasonal trends.
- The second figure displays the proportion of episodes in each AN-SNAP class over the last 5 years.
- The third is a table outlining key data for the respective impairment group by AN-SNAP class.
- The fourth figure provides a summary of the discharge destination of all episodes by AN-SNAP class.
- The fifth figure provides a graphical representation of length of stay (LOS) and improvement in the FIM (Functional Independence Measure) by AN-SNAP class.
- Finally, the sixth figure presents the key changes in rehabilitation outcome measures between last year and this year. The horizontal axis describes the difference between last year and this year averages, while last year's actual values are presented on the left side of the graph.
